Assume that the diameter of the tire is expanded to Ton of an inch larger than the center, and that the original temperature is 60. Solution.--For this case, formula 22 may be used. The original diameter of the tire is 49.94 inches, and it is to be increased to 50.001 inches. The area of a circle 49.94 inches in diameter is 1,958.79 square inches. Area of circle 50.001 inches in diameter is 1,963.58 square inches. The difference between them is 1,963.58--1,958.79 = 4.79 square inches = a in formula 22. Hence, since  $Ct = .00001198$ , and  $A = 1,958.79$ , substitute these values in  $a = A C, t$ , and  $4.79 = 1,958.79 \times .00001198 \times t$ .  $t = .023466$ . Therefore,  $t = Q = 264.125$ , and  $204.125 + 60 = 264.125$ . Ans. Note.--Owing to the form of the equation here denoted by formula-- and to the manner in which the coefficients C, were determined, this example may be more easily solved by means of formula 21. Thus, regard the diameter as a linear dimension and apply formula 21. Increase in diameter =  $t = 50.001 - 49.94 = .061$  inches.  $L = 49.94$  and  $C = .00000599$ . Substituting,  $.061 = 49.94 \times .00000599 \times t$  or,  $49794,000599$  The slight difference in the two answers is immaterial, and is to be expected. Example 2.--What is the decrease in volume of a copper cylinder 30 inches long and 22 inches in diameter, if cooled from 212...
